

	Manual Title: ADMINISTRATION MANUAL	
	Document Number: WGI-PL-ITD-001	Revision Number: 02
	Document Title: IT PREVENTIVE MAINTENANCE AND REPAIR	

1.0 OBJECTIVES

- 1.1 To define the roles, responsibilities and critical elements for the efficient operations and support of Information Technology Department (ITD) systems at W Group Inc. (WGI).
- 1.2 To support ITD systems in production, and ensure effective operations and troubleshooting when necessary. These includes:
 - 1.2.1 Sufficient system capacity (processing power, network access and bandwidth, data storage, etc.).
 - 1.2.2 Monitoring procedures to proactively detect and address system issues or disruptions.
 - 1.2.3 Procedures to answer users' service requests, as well as system problems, incidents or disruptions, in a timely manner.

2.0 SCOPE

This applies to all IT systems or applications managed by the W Group Inc. that store and process to transmit information, including network and computer hardware, software and applications, mobile devices and telecommunication systems.

3.0 DEFINITION OF TERMS

- 3.1 **Computer Hardware** – refers to the physical components of a computer system that are tangible and can be touched or felt. The hardware of a computer system includes the Central Processing Unit (CPU), motherboard, Random Access Memory (RAM), Hard Disk Drives (HDD), Solid-State Drives (SSD), Graphics Processing Unit (GPU), Power Supply Unit (PSU), and other peripheral devices such as keyboard, mouse, monitor, and printer.
- 3.2 **Corrective Maintenance (CM)** – an emergency maintenance of a system software or computer hardware, carried out in response to the development of a fault. This may also be termed as repair.
- 3.3 **Database** – an organized collection of data generally stored and accessed electronically from a computer system.
- 3.4 **ITD Ticketing System** – refers to the ticketing system used by the IT Personnel to handle and manage incidents, users request and support.
- 3.5 **Preventive Maintenance (PM)** – a planned maintenance of a system, carried out on a scheduled basis.
- 3.6 **System Software** – a collection of data or computer instructions that tell the computer how to work. It is all information processed by computer systems, programs and data. This includes computer programs, libraries and related non-executable data, such as online documentation or digital media.

4.0 RESPONSIBILITY

- 4.1 **Asset Owner** - responsible for acknowledging maintenance rendered by IT Personnel for Computer Units, maintaining the cleanliness of the unit, creating tickets, and ensuring communication with IT Personnel regarding the ticket.
- 4.2 **Building Administrator** - responsible for acknowledging maintenance/service rendered by IT Personnel for CCTV and Biometric Units.
- 4.3 **IT Head** - responsible for reviewing and approving the Annual Preventive Maintenance.
- 4.4 **IT Personnel** - responsible for executing the assigned preventive and corrective maintenance activities.
- 4.5 **IT Supervisor** - responsible for monitoring and preparing the Annual Preventive Maintenance. Also responsible for assigning IT Personnel for each preventive maintenance tasks and tickets.

5.0 POLICY

- 5.1 Preventive Maintenance Coverage
 - 5.1.1 The IT Department shall conduct and provide inventory or asset management of IT equipment to be maintained.
 - 5.1.2 The IT Department shall ensure that the following are well-maintained to support optimum performance and to reach their maximum life spans without any hassle:

	Manual Title:		ADMINISTRATION MANUAL
	Document Number:	WGI-PL-ITD-001	Revision Number: 02
	Document Title: IT PREVENTIVE MAINTENANCE AND REPAIR		

- 5.1.2.1 Hardware (including CPU, Computer peripherals, acquired printers, Laptops, CCTVs, Biometrics).
- 5.1.2.2 Software and Applications.
- 5.1.3 IT Supervisor shall prepare an annual preventive maintenance schedule stated in **5.3 Preventive Maintenance Schedule and Frequency Reports** and shall be reviewed by the IT Department Head.
- 5.1.4 The IT Supervisor shall use the **WGI-FR-ITD-010 Monthly Preventive Maintenance Schedule** to allocate and assign the tasks to each IT Personnel on a monthly basis based on the plotted annual schedule.
- 5.1.5 The IT Department shall complete a maintenance report when carrying out any kind of maintenance stated in Section **5.4 Preventive Maintenance Report**.
- 5.2 Preventive Maintenance
 - 5.2.1 Hardware
 - 5.2.1.1 Whenever possible, the IT Department shall take preventive measures to prevent problems from occurring and to minimize the impact of incidents occurring by addressing identified problems as quickly as possible.
 - 5.2.1.2 The IT Personnel shall use the following forms depending on the activity.
 - 5.2.1.2.1 **WGI-FR-ITD-011 Computer Units Preventive Maintenance Form** when conducting preventive maintenance on hardware units, software and applications.
 - 5.2.1.2.2 **WGI-FR-ITD-006 CCTV System Preventive Maintenance Form** when conducting preventive maintenance on CCTV units.
 - 5.2.1.2.3 **WGI-FR-ITD-008 Biometrics Preventive Maintenance Form** when conducting preventive maintenance on Biometrics
 - 5.2.1.2.4 **WGI-FR-ITD-003 Server Maintenance Checklist** when conducting preventive maintenance on Network (NAS, Router, Switches, Firewall, UPS), Server Racks & Cables, and Telephone & PBX Server.
 - 5.2.1.3 For identification and traceability, the IT Department shall properly tag all the computer hardware.
 - 5.2.1.4 Mobile computing devices must not be left unattended without physical security protection in place e.g., security cable attached to the equipment, locked in a secure cabinet, in a locked office, proper storage area with tag, or vault.
 - 5.2.1.5 The IT Department Head has the discretion to depend on the procedures based on their requirements and constraints.
 - 5.2.2 Software and Applications
 - 5.2.2.1 Recommended to exclusively use and install authentic software and licensed products; however, it is permissible to consider utilizing even free software when appropriate.
 - 5.2.2.2 The development of new applications must follow the Project Management Policy (if applicable).
- 5.3 Preventive Maintenance Schedule and Frequency Reports
 - 5.3.1 Computer Units
 - 5.3.1.1 Computer's CPU Box must be cleaned semi-annually and observed by the IT Personnel on a regular basis.
 - 5.3.1.2 Computer peripherals must be cleaned regularly and observed religiously by all employees with computer units.
 - 5.3.1.3 Disk Cleanup Utility and Disk Defragmenter shall be performed monthly and observed by the IT Personnel on a regular basis.
 - 5.3.1.4 The IT Personnel shall do enabling and updating Anti-Virus and performing virus scan on a daily and weekly basis.
 - 5.3.1.5 The IT Personnel as prompted by the OS shall update Operating System (OS).
 - 5.3.2 CCTV System
 - 5.3.2.1 A preventative maintenance visit shall allow the IT Personnel to carry out a complete audit or check of CCTV surveillance system, documentation associated with the CCTV system, and training requirements of users.

	Manual Title:		ADMINISTRATION MANUAL
	Document Number:	WGI-PL-ITD-001	Revision Number: 02
	Document Title: IT PREVENTIVE MAINTENANCE AND REPAIR		

- 5.3.2.2 The CCTV surveillance system shall receive at least one preventative maintenance visit each year. However, additional maintenance visits may be required depending on the complexity of the system, the environmental conditions, and the need to change 'perishable items' (i.e. wiper blades, cassettes, batteries, etc.).
- 5.3.2.3 IT Personnel shall inform the Building Administrator prior to conducting the preventive maintenance for CCTV units.
- 5.3.3 Servers
 - 5.3.3.1 IT Personnel must perform maintenance on the Servers semi-annually, or more if necessary to extend the system's lifespan and performance.
- 5.3.4 Biometrics
 - 5.3.4.1 IT Personnel must perform maintenance on the biometrics system semi-annually, or more frequently if necessary. This is essential to extend the system's lifespan and optimize its performance, particularly the memory (RAM) capacity.
 - 5.3.4.2 The IT Department (IT Head, IT Supervisor and IT Personnel) shall monitor and keep the historical time logs in Biometrics. Preventive maintenance shall be applied, for it is crucial as biometrics databases usually have a threshold to the number of registrations they can efficiently process. Exceed this and the system slows down, stalls and begins to fail, affecting operational and productivity efficiencies and increasing risk.
 - 5.3.4.3 IT Personnel shall inform the Building Administrator prior to conducting the preventive maintenance for biometrics units.
- 5.4 Repair
 - 5.4.1 Problem and Incident Management
 - 5.4.1.1 Whenever possible, the IT Department shall take preventive measures to avert problems from occurring and minimize the impact of occurring incidents by addressing identified problems as quickly as possible. Examples of preventive measures include the implementation of high availability and redundancy of system backup solutions.
 - 5.4.1.2 Problems and incidents with high or critical priority shall be reported through ITD Ticketing System within two (2) hours of detection to restrain the issue, and if possible, prevent any further impact.
 - 5.4.1.3 The IT Department shall conduct investigation into problems and incidents with high or critical priority to determine the root cause, to remediate the issues and return to a normal situation in a timely manner.
 - 5.4.1.4 The IT Department shall communicate with all internal and external parties affected by the problem or incident, including employees, the public, business partners, and law enforcement authorities as necessary.
 - 5.4.2 Vulnerability and Patch Management
 - 5.4.2.1 The following activities shall be carried out to assist IT Department in the identification of vulnerabilities to systems and applications:
 - 5.4.2.1.1 Publicly accessible web applications must be scanned at least once every quarter.
 - 5.4.2.1.2 Non-publicly accessible web applications must be scanned at least every six months.
 - 5.4.2.1.3 Network vulnerability scanning at least once every quarter.
 - 5.4.2.1.4 Penetration testing, including a comprehensive review of the system's security configuration, must be conducted at least once a year.
 - 5.4.2.2 Identified vulnerabilities must be addressed in a timely manner. All critical and high vulnerabilities should be fully resolved within a maximum of 24 hours, if possible.
 - 5.4.2.3 System security updates and patches shall be applied in a timely manner after they have been published by the vendor. Critical security patches must be applied no later than a month after they have been made available, if possible.
 - 5.4.3 System Replacement
 - 5.4.3.1 For IT systems that will no longer be supported by a vendor (including operating systems and application versions), the IT Department shall upgrade or replace the system at least one year prior to the end of the vendor's support.
 - 5.4.3.2 The IT Department shall replace IT systems and/or equipment that no longer provide an acceptable level of performance as follows:

	Manual Title: ADMINISTRATION MANUAL	
	Document Number: WGI-PL-ITD-001	Revision Number: 02
	Document Title: IT PREVENTIVE MAINTENANCE AND REPAIR	

- 5.4.3.2.1 Desktops and laptops must be replaced approximately every five (5) years.
- 5.4.3.2.2 Servers and databases shall be upgraded to the latest OS version every three (3) years, if possible.
- 5.4.3.2.3 Commercial applications must be upgraded to the latest version available every three (3) to four (4) years, at a minimum.

5.4.4 Repair Report

- 5.4.4.1 The IT Personnel shall complete a **WGI-FR-ITD-002 Service Report Form** after carrying out any kind of repair.

5.5 Help Desk and User Support

- 5.5.1 The IT Help Desk shall act as the central point of contact for all IT technical requests.

- 5.5.2 The IT Help Desk shall use the following guidelines to prioritize its response to requests:

PRIORITY	CRITERIA	RESPONSE TIME
Critical	Critical issues are the highest priority and represent severe disruptions that significantly impact business operations or services. They require immediate attention and resolution. For example: 1. Total network outage affecting all users. 2. Server hardware failure that disrupts critical applications. 3. Security breach or data breach.	Within 4 hours
High	High-priority issues are significant problems that have a noticeable impact on business operations but may not be as severe or immediate as critical issues. For example: 1. Major software application failure affecting a department. 2. Frequent system crashes impacting productivity. 3. Critical hardware component failure affecting multiple users.	Within 1 day
Medium	Medium-priority issues are problems that are affecting specific users or departments but are not causing widespread disruptions. They require timely attention but may not be as urgent as critical or high-priority issues. For example: 1. Individual user workstation issues. 2. Non-critical software glitches. 3. Routine hardware maintenance or replacement.	Within 3 days
Low	Low-priority issues are typically non-urgent and may not have an immediate impact on business operations. They are often used for non-critical inquiries or requests. For example: 1. General inquiries or information requests. 2. Non-urgent software or application feature requests. 3. Routine IT administrative tasks.	Within 5 days

- 5.5.3 The response time encompasses the entire process of request handling, involving analysis, classification, ticket assignment, dispatch to IT Personnel, and concluding with the resolution of the concern.

- 5.5.4 The assigned IT Personnel shall respond to all requests submitted to the ITD Ticketing System within the turnaround time as much as possible. If a request cannot be processed within the allotted time, the IT Personnel must inform the requester. In any case that the request is unresolved by the IT Personnel due to complexity, a support escalation must take place.

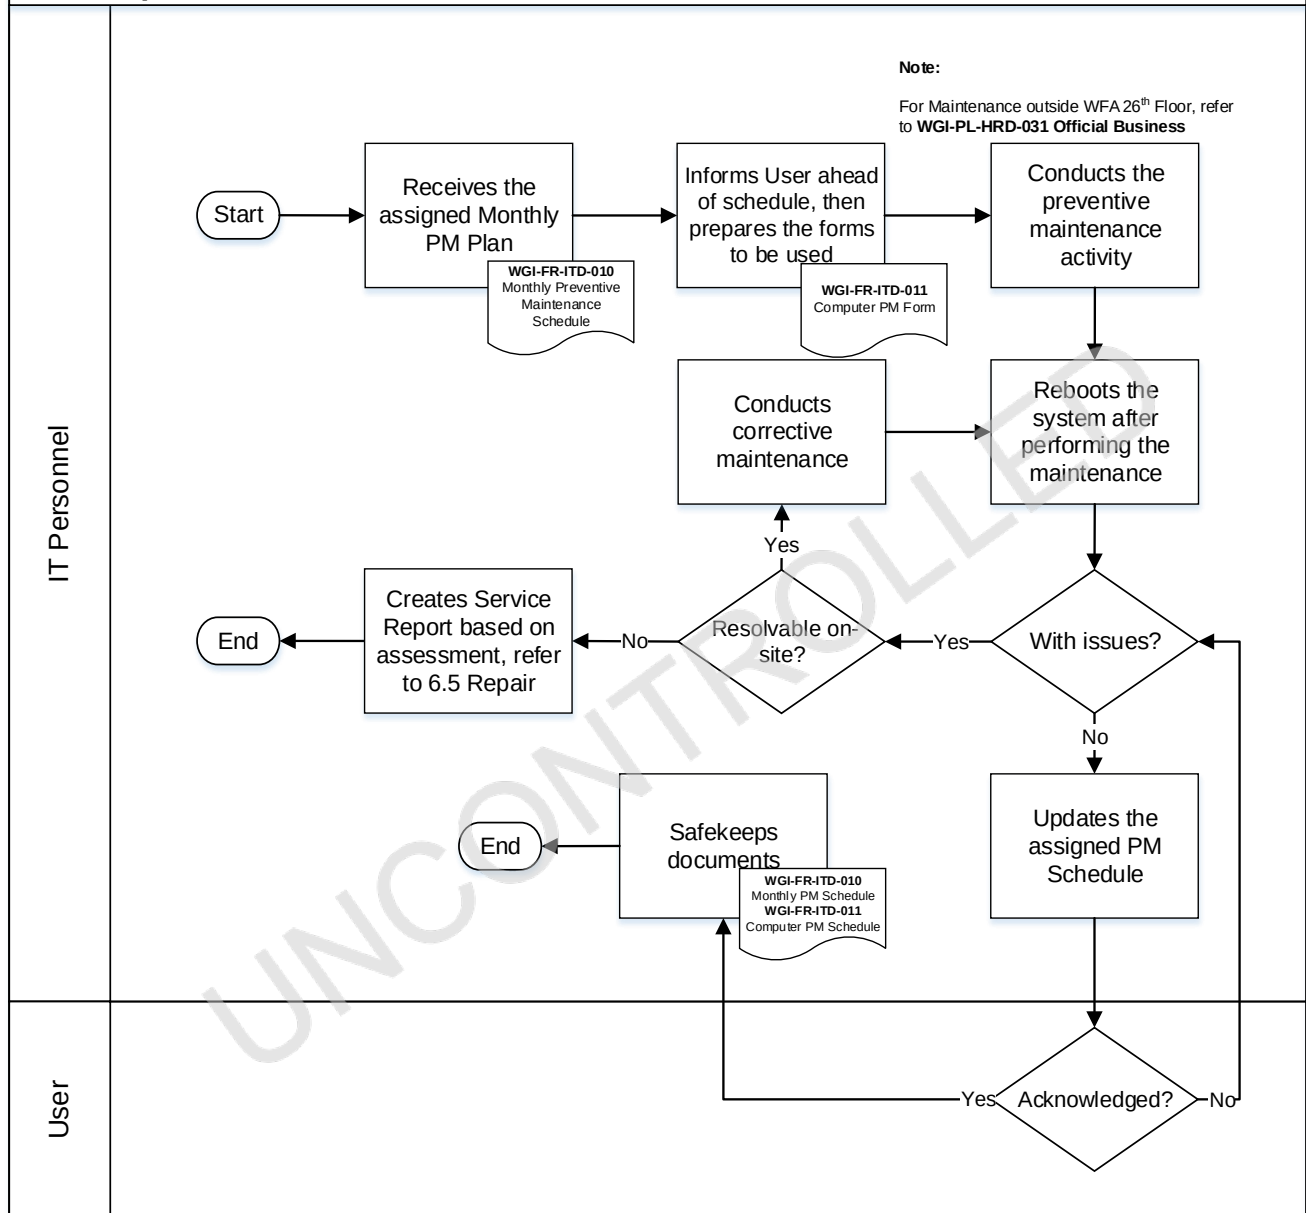

5.6 Competency

- 5.6.1 Fully trained IT Personnel.

6.5 Corrective Maintenance (Repair)

7.0 ADMINISTRATION

The IT Department is directed to manage, implement and monitor compliance to all the provisions stipulated in this policy.

8.0 DEVIATION FROM THE POLICY

Any deviation from this policy shall be subject to disciplinary action based on the Employees Code of Conduct with the endorsement of the IT Head to the Human Resources Department unless otherwise such deviation will be approved by the Top Management.

9.0 AMENDMENTS OR REVISION OF POLICY

Any amendment or revision of this policy shall be subjected for approval of the Top Management upon the endorsement of the Information Technology Department.

10.0 REVIEW

This policy will be reviewed annually unless there is a reason to modify, revise or supersede this policy before the end of the year.

11.0 INTERPRETATION

The Managements' thrust is by giving proper guidance to its officers and employees handling critical tasks in the management and controls of this policy and in the execution of his/her job responsibilities as directed by its immediate line of command and/or by the Top Management.

	Manual Title:		ADMINISTRATION MANUAL
	Document Number:	WGI-PL-ITD-001	Revision Number: 02
	Document Title: IT PREVENTIVE MAINTENANCE AND REPAIR		

12.0 REPEALING CLAUSE

All other policies, minutes, memos, and letters issued before which are inconsistent with provisions of this policy are deemed waived, vacated, repealed, or modified accordingly.
